

Bus-Scan Light Control

Features and Benefits

Complies with Illinois SB0166

The Bus-Scan Light Control automatically illuminates up to three interior light circuits while the drivers perform their seat check. The interior light will remain on for 2 minutes.

Each circuit is individually fused to maintain system integrity and safety.

When activated, the Bus-Scan Light Control totally isolates the lighting circuit- no dangerous "back feeding" of the electrical system.

When not active, the Bus-Scan Light control is fully transparent to the vehicle's electrical system.

The Bus-Scan Light Control will work with all brands of seat reminders, or even stand-alone.

Totally self-contained; no external components required.

Installation time is approximately 30 minutes.

Specifications:

Dimensions 4.25 x 2.25 x 1.5

Weight : 4 Oz

Material: Flame retardant ABS plastic

Flame Rating: UL-94V-0 (ID-3420 rated UL94-5VA)
